**DETAILED ACTION**

***Drawings***

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

At present the examiner has used the drawings filed as part of the PCT priority papers to begin examination.

***Claim Objections***

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 15-21 been renumbered as 14-20.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ogawa et al (US 4,576,368). Ogawa et al shows a table mechanism for raising and lowering the patient support bed used in combination with a tomograph device 10. The table mechanism comprises a base 60, table 50, a parallel linkage 70 attaching the table to the base, a driving mechanism 80, and angle detector 80, and a control system 90. The parallel linkage 70 comprises a pair of links 71, 72 which are pivotally attached to the base 60 at horizontal pivots, and at opposed ends to the table 50 at horizontal pivots. The driving mechanism is pivotally attached at one end to the base 60 at an opposed end to the linkage 70. By extending and retracting the driving mechanism 80 the linkage 70 can be raised and lowered, which in turn raises and lowers the table 50. Note that the link 72 is adjacent one end of the table 50, and that when the table is lowered as shown in Figures 8a and 8b the base pivot of this link does not have the table over it in a vertical direction. The table 50 supports a patient cradle 32, which can be extended into a gantry 10 of the tomography device for imaging. As shown in Figure 1, it is known to support the distal end of the cradle 32 upon a secondary support 40 placed on the other side of the gantry 10.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tybinowski et al (UA 7,077,569), Izuhara (US 7,024,710), and Hum (US 5,657,498) show patient examination table lifting devices which are of particular interest.
